

SmartCut Plus

The smartest cut in semi-automated laser microdissection

Key Features

- Contamination free sampling
- Single or multiple sample collection
- Automatic CapLift
- Adjustable contact pressure

SmartCut Plus - Microdissection system

The Olympus SmartCut Plus, based on the inverted CKX41 microscope, bridges the gap between the manual SmartCut and the fully automated CellCut Plus system. Exactly the same laser and unique patented isolation technology is used as in the well-proven CellCut Plus laser microdissection system. Single or multiple samples can be collected with adjustable contact pressure using the new plug & play automated CapLift
