

SmartCut

The smartest cut in laser microdissection

Key Features

- Compact, stand alone instrument
- Excellent price-performance ratio
- Facilitates daily micromanipulation routines
- Easy operation, ideal for teaching and education

SmartCut - Microdissection system

The Olympus SmartCut, based on the inverted CKX41 microscope, is the ideal laser microdissection system for all routine applications e.g. in pathology and forensic medicine, as well as for teaching and educational purposes. No compromise was made in the essential parts of this compact, stand alone and ready-to-use instrument. Thus a safe, reliable and precise microdissection process is guaranteed. Exactly the same laser and unique patented isolation technology is used as in the well-proven CellCut Plus laser microdissection system.
